## Full size keyboard and enhanced sound system set a new standard in mini notebooks

Samsung launches the N120: the 10.1" mini notebook that makes it easy to enjoy life

**Vienna, Austria, March 24, 2009** - Samsung Electronics, a market leader in consumer electronics and world leader in IT technology, today launched the innovative Samsung N120 mini notebook. Although slim at just 10.1", the N120 is designed for optimum usability and performance, with its full-size 12" notebook style keyboard, larger touchpad and an ultra-lightweight and robust slimline casing. What's more, its enhanced sound system means you can experience a rich multimedia experience when you are on the go.

With the N120 you can enjoy high-quality sound anywhere using its integrated SRS 2.1ch system, featuring 2 x 1.5 Watt stereo speakers with a dedicated sub-woofer. It also features a larger touchpad and a full-size 12" notebook style keyboard with optimized key spacing, so you can type faster and make fewer mistakes. Its ergonomic design places less strain on your wrists, which all adds up to a more enjoyable and productive experience.

Shielded by the robust Samsung Duracase, this mini notebook is more than capable of rolling with the punches. Having passed a grueling series of quality assurance tests, ranging from rapid temperature change to electrical surges, it sets new standards for survivability and resilience, giving you much less to worry about when you're traveling.

As well as being extremely portable, the N120 also delivers a significantly longer battery-powered performance of up to 10.5 hours\* with a long-life 6 cell battery, independent of any power supply, for maximum freedom and mobility. The unique combination of its power efficient LED display and optimized processing performance coupled with Samsung's class-leading engineering ensures that you're always ready to go anywhere and do anything thanks to the N120's vastly improved battery life.

To help you get the most out of life when you're out and about the N120's small form is packed with comprehensive array of the latest technology for maximum performance on the move, including advanced connectivity tools to help you stay in touch.

An integrated 1.3 megapixel digital motion camera combines the resolution and image quality of a still camera with the sustained high frame rates of a video camera, so it's much easier to keep in touch with friends and family, using video-conferencing or live messaging.

To make it as simple as possible to exchange data, including documents, pictures and music, between almost any modern camera, peripheral or audio-visual device, the N120 incorporates a range of advanced connectivity tools, including a 3-in-1 memory card reader, 3 built-in USB ports and optional Bluetooth 2.0+EDR (Enhanced Data Rate).

As well as safeguarding your data, the N120 also uses the latest medical technology to protect your health by providing a more hygienic computing environment. Its anti-bacterial keyboard is coated with a special finish that successfully eliminates virtually all bacteria by making it almost impossible for them to live and breed.

"Now everyone can afford to experience exceptional portability and usability with the full sized keyboard and advanced communications tools of the ultra-light Samsung N120 mini notebook. It's the perfect choice for anyone who needs to stay in touch on the go," said Seong Woo Nam, Senior Vice President of Samsung Computer Systems Division.

The Samsung N120 will be available from April 6 in European, CIS, Asian countries, and also in the U.S.
